SUBJECT INDEX

A

- Abortive transduction, 271-73
- Alleles and linkages
 - in major genes of bees, 417-20
- Allelic exclusion in immunoglobulin differentiation, 232-33
- Allotype production
 - suppression of by antisera, 233-34
- Allotypes in immunoglobulins, 215
- Allotypic specificity in immunoglobulins
 - evolutionary implications of, 226-28
- Allotypy, 341-42
- Aneuploidy
 - effect on recombination, 66-67, 77
- Anomalous complexes, 393-402, 408-9
 - fine structure and composition, 394-95
 - significance of, 401-2
- Antibodies
 - genetics of, 209-44
- Antigenic differentiation in ciliates, 126-30
- Antigens, immune response to
 - complex, 241
 - synthetic, 235-41
- Axial element of synaptnemal complex, 367
- and chromosomal structure, 376-80

B

- Bee genetics, 413-38
- Bees
 - alleles and linkage of major genes, 417-20
 - behavior genetics of, 425-27
 - body color in, 422-24
 - breeding for economic characteristics, 430-31
 - classification and geographical variation, 413-16
 - cytology and cytogenetics, 416-17
 - disease and pest resistance in, 424-25
 - evolution of social life in, 429-30

eye

- colors in, 421, 424
- shape in, 424
- maintenance of genetic variability in populations, 427-29
- phenogenetics, 417-27
- population genetics of, 427-50
- sex determination in, 420-21
- techniques for artificial insemination, 431
- for irradiation, 431
- for observation, 432
- Bivalents and synaptnemal complex, 370-72
- Body weight and radiation damage, 109-10
- Bouquet model and recombination, 76-77
- Branched synthetic polypeptides
 - immune response to, 235-39

C

- Campbell's model for transduction, 258-60
- Canalizing selection, 176-78
- Cell culture
 - see Cultured mammalian cells
- Cellular genetics of the immune response, 232-34
- Central element of synaptnemal complex, 367
- fine structure of, 382-86
- Centromere repulsion and recombination, 77-78
- Chiasma formation and synaptnemal complex, 388-93
- Chromosomal and subchromosomal inactivation, 31-52
- Chromosomal recognition systems in lambdoid phages, 320-29
- Chromosome function
 - factors controlling, 24-27
 - regulation of, 11-30
- Ciliate genetics
 - methodological considerations, 122-26
 - patterns and programs of gene action, 121-40

Ciliates

- conjugation in, 124-25, 131
- cytoplasmic inheritance in, 125-26
- mating-type determination in, 130-34
- temporal patterns of gene activity in, 134-37
- Cohesive ends
 - necessity of for transduction, 261-62
- Complex antigens
 - immune response to, 241
- Complex, synaptnemal
 - see Synaptnemal complex
- Complexes
 - anomalous, 393-402, 408-9
 - significance of, 401-2
 - associated with X chromosomes, 399-401
 - multiple in nucleoli, 398-99
 - in spermatids, 397-98
- Conjugation in ciliates, 124-25, 131
- Correlated responses to selection in populations, 169-71
- Crossing over
 - molecular model of, 409-11
 - and synaptnemal complex, 388-93
 - see also Recombination
- Crossover, illegitimate, 260-61
- Cultured mammalian cells
 - biochemistry of, 146-47
 - biology of, 142-45
 - cytoplasmic fusion in, 154-55
 - genetics of, 141-64
 - hybridization in, 155-60
 - nuclear fusion in, 155-60
 - sources of variant strains, 147-49
 - specialization in, 145-46
 - transformation in, 153-54
- Cytological polymorphs in populations
 - and fitness, 186-89
 - incidence, 184-86
- Cytoplasmic fusion in cultured mammalian cells, 154-55
- Cytoplasmic inheritance in ciliates, 125-26

D

- Developmental abnormalities as indicators of radiation damage, 108-9
- Diet and genetic variance in populations, 172-74
- Differentiation of the immune response, 232-34
- Directional response to selection in populations, 167-69
- Disruptive selection, 166, 179-81
- Diversifying selection, 166, 179-81
- DNA-mediated genetic transformation in cultured mammalian cells, 153-54
- DNA replication control of in lambdoid phages, 322-24
- DNA sequence recognition in lambdoid phages general comments, 328-29
- DNA synthesis and synaptonemal complex, 390-93

E

- Environmental factors and selective precision in populations, 172-74
- Experimental population genetics, 165-208

F

- Fitness of polymorphs cytological, 186-89
- isoallelic, 183-84
- morphological, 186-89
- Fitness traits genetic basis of, 191-95
- and genetic modifiers, 189-95
- Fused supernumeraries, 401

G

- Gene action control of in lambdoid phages, 309-19
- heterochromatin and other systems of control of, 48
- patterns and programs in ciliates, 121-40
- stable vs. modulatory control of, 14-15
- temporal patterns of in ciliates, 134-37
- Gene-addition in transduction, 268-71
- Generation of diversity of

- variable region of immunoglobulins, mechanism of, 228-31
- Gene-substitution in transduction, 266-68
- Genetic abnormalities in cultured cells, 147-49
- Genetic assimilation, 174-76
- Genetic effects of radiation on mammalian population, 87-120
- Genetic load measurements of, 196-98
- in populations, 195-99
- Genetic models of human population structure, 296-301
- Genetic recruitment, 175-76
- Genetics of antibodies, 209-44
- of bees, 413-38
- of cultured mammalian cells, 141-54
- of lambdoid phages, 305-40
- Genetic states of ciliates, 128-29
- Genotype-environment interactions in population genetics, 172-74

H

- H-chain genes, 215-28
- linkages of, 222-25
- H-chains of immunoglobulins, 211-12, 215-28
- Heterochromatic chromosomes and inactivation, 14-15, 32, 47-48
- Heterochromatin facultative and constitutive, 47-48
- and recombination, 81-82
- Heterokaryocytosis in cultured mammalian cells, 154-55
- Heteronuclear cell lines, 142-45
- genetic markers in, 149-50
- Histocompatibility and radiation damage, 110-11
- Histone repression, 21-24
- Homonuclear cell lines, 142-45
- genetic markers in, 150-53
- Human cells in culture genetic abnormalities in, 147-49
- properties of homonuclear and heteronuclear lines, 142-45
- Human genetics: structure of population, 279-304

- Human patterns of mating, 283-87
- of migration, 293-96
- of mortality, 291-93
- of reproduction, 287-91
- Human population parameters interrelationships of, 296-301
- Human population replacement and renewal models of, 280-82
- Human population size, 282-83
- Human population structure genetic models of, 296-301
- requirements of the future, 301
- Human serum protein polymorphisms, 341-62
- Hybrid formation model of transduction, 256-68
- Hybridization in cultured mammalian cells, 155-60

I

- Ichthyosis locus and Xm series, 360-61
- Ig loci allotypic antigens for, 225
- detection of allotypic antigens with heterologous antisera, 225
- electrophoretic mobility of allotypes, 225-26
- structural localization of, 225
- Ig-1 locus, alleles of, 216-20
- Ig-2 locus, alleles of, 220-21
- Ig-3 locus, alleles of, 221-22
- Ig-4 locus, alleles of, 222
- Illegitimate crossover, 260-61
- Immune response cellular genetics and differentiation in, 232-34
- to complex antigens, 241
- to specific antigens graphic control of, 234-41
- to synthetic polypeptide antigens, 235-41
- branched, 235-39
- linear, 239
- poly-L-lysine, 239-41
- Immunoglobulins allelic exclusion in, 232-33
- classes of, 213-15
- evolutionary implications of allotypic specificities, 226-28
- evolution of, 212-13

- generation of diversity of variable region, 228-31
- genetically determined electrophoretic mobility of, 225-26
- H-chain genes of, 215-28
- L-chain types, 228
- structure of, 211-12
- Inactivated chromosomes
- function of, 45-48
- relation to other gene control systems, 48
- Inactivation
- chromosomal and subchromosomal, 31-52
- evidence concerning, 32-41
- heterochromatic chromosomes and, 14-15
- mechanism of, 41-45
- Interchromosomal interference in recombination, 69-71, 75-76
- regional specificity, 70-71
- Intrachromosomal interference in recombination, 68-69, 75
- Inversions
- effect on recombination, 55-62, 74, 75, 80-81
- Isoallelic variants in populations and fitness, 183-84
- incidence, 182-83
- Isoimmunisation in humans, 342
- L**
- Lambda
- see Lambdoid phages
- Lambda chromosome, mature joining the ends of, 324-25
- opening the ends of, 325-26
- structure of, 306-9
